

Family Trip Dashboard

Quick Start · make it your own in about 15 minutes

A shared page for any trip: everyone votes on activities, sees the day-by-day plan, tracks flights and bookings, shares a packing list, and exports it all to their calendar. It arrives filled with a **fake sample trip** — your job is to swap in your own. No coding required.

The fastest way — let an AI fill it in

1. Open the file **BUILD_WITH_AI.md** and copy the big prompt inside it.
2. Paste it into **ChatGPT, Claude, or Gemini** and fill in your trip where it says YOUR TRIP.
3. The AI replies with one block of data. Copy it.
4. In **public/index.html**, find the line `<script ... id="trip-data">` and replace everything between it and `</script>` with what the AI gave you. Save.

Prefer to type it yourself? See "Make it your trip" in README.md.

Try it on your computer

Install **Node.js 24** (free, nodejs.org). Then in this folder:

```
npm install
npm start
```

Open **http://localhost:3000**, log in as any traveler, and set a 4-digit PIN.

The one thing that trips people up

Every traveler's name must be spelled **the same in three places**:

- each name in **family** (public/index.html)
- **ALLOWED** (server.js)
- **PLANNERS** (server.js)

Miss one and that person can't log in.

Put it online for the family (when ready)

A complete step-by-step kit — including **HTTPS** (the padlock) — is in the **deploy/** folder. A small cloud server runs about \$4–6/month. Start with **deploy/DEPLOY.md**.

Where to look: **START_HERE.md** overview · **BUILD_WITH_AI.md** AI path · **README.md** by hand · **deploy/DEPLOY.md** go live
